## PRESS RELEASE

### Five Collections Editors appointed

August 2009

Scrivener Publishing is pleased to announce the appointment of five Collection Editors, all of whom are veterans in their fields.

**Dr. James Couper** will take charge of the Chemical Engineering collection. Jim has been a chemical engineer for more than 40 years and we are privileged to be able to benefit from his expertise. Of special note, Jim has contributed a chapter to the seminal "Perry's Chemical Engineers' Handbook".

**Dr. Richard Erdlac** will head up our Geothermal collection. As we seek to be an all round energy publisher, we are excited that Richard has agreed to take charge of geothermal. While geothermal is still in its infancy, we are convinced it will become more crucial to meeting the country's energy needs, and we anticipate our collection to follow the same curve.

**Dr. S.A. Sherif** is taking the top spot in the all important and much publicized area of solar energy. With so much R & D money, new products, and start-up companies in the solar arena, we expect this collection to be thriving and a destination for people seeking practical and accessible information.

**Kent Muhlbauer** is going to lead the specialist subject of "Pipelines". As pipelines are a requirement to the oil & gas industry, Scrivener Publishing also

needs to focus on these small but critical areas. Kent has been doing pipelines for 30 odd years and we couldn't have a more experienced expert in our camp.

**Dr. Andrew Nee** is based in Singapore and he will provide leadership of the Industrial Engineering and Manufacturing list. The collection will concentrate on the macro view of manufacturing incorporating the 'hard' aspects such as machining and processes as well as the 'soft' aspects such as optimization and supply chain.
